

# How to import MA2 Showfile

Hi, thanks for checking out my designs.

The premade showfile is running v3.8.0. If you wish to use this design in an earlier version of MA then download the WYG2MA Converter from <https://www.mschoeffmann.com/tools/wyg2gma-converter/> and import the .csv file included in this folder. A list of Fixtures and modes used are in the "Fixture Info" Folder.

To import the MA File simply download the "FILE.show.gz" file and copy it into your \shows folder on your computer. Do not extract the file! This folder can be found at:

C:\ProgramData\MA Lighting Technologies\grandma\gma2\_V\_3.8\shows
